Dear Dr BECÚ,

As the European reference laboratory for equine diseases (Eu-RL), we organized this year three different proficiency tests (PT) which were:

- Dourine serological PT: 20 samples to be analyzed (7 negative and 13 positive),
- Equine Infectious Anemia PT using AGID test: 24 sera to be analyzed (12 negative and 12 positive),
- Equine Infectious Anemia PT using ELISA: 24 sera to be analyzed (8 negative and 16 positive).

Your institute (lab code 18-AN) participated to those three PT and obtained **satisfactory results to them.**

Do not hesitate to contact us if you need further information.

Best regards,

Aymeric HANS

Head of the VIPARE unit
